Allowable Subject Matter

1. Claims 1-2,4,8-10,13-25,27-59 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art fails to disclose or render obvious a method of optimizing a cycle time of a liquid dispensing module in combination with the other claimed limitations of claim 1:

“selecting the initial air volume of the air cavity and the effective valve flow coefficient of the solenoid valve such that a cycle time of the liquid dispensing module is less than or equal to 9 milliseconds”.

The prior art fails to disclose or render obvious a liquid dispensing module in combination with the other claimed limitations of claim 10:

“a nozzle removably mounted within said nozzle-receiving space of the dispenser body in fluid communication with said discharge outlet, said nozzle having a wedge-shaped side portion that is engaged with said wedge-shaped recess in said nozzle-receiving space when said set screw is advanced in said threaded passageway to apply a force against said nozzle”.

The prior art fails to disclose or render obvious a liquid dispensing module in combination with the other claimed limitations of claims 13 and 36:

“a second valve stem segment including a second valve plug, said second valve stem segment operatively coupled for movement with said first valve stem segment, said first and said second valve stem segments being movable between a first position in which said first valve plug contacts said first valve seat to stop the flow of the liquid from said liquid inlet to said recirculation outlet and

Art Unit: 3754

said second valve plug is out of contact with said valve seat to permit the flow of the liquid from said liquid inlet to said discharge outlet and a second position in which said first valve plug is out of contact with said first valve seat to permit the flow of the liquid from said liquid inlet to said recirculation outlet and said second valve plug contacts said second valve seat to halt the flow of the liquid from said liquid inlet to said discharge outlet”.

Further, the prior art fails to disclose or render obvious a method of intermittently dispensing a liquid from a liquid dispensing module in combination with the other claimed limitations of claim 32:

“moving the flow-control mechanism with the pneumatic actuator from the open position to the closed position in a second portion of the cycle time to stop dispensing the liquid from the discharge outlet, wherein the cycle time is less than or equal to 9 milliseconds”.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
